AB	Cosmetic and dermatol. compns. for psoriatic skin and scalp treatment contain e.g., 0.1-8% aq.-alc. ext. of the mixt. comprising, e.g., nettle, Chelidonium, 0.1-5.0% thyme and lemon oils, 0.5-8% corn germ oil, 0.2-6% salts of natural origin, 0.3-10% propolis ext. and 0.1-8% tocopherol acetate and d-panthenol. The compns. further contain additives, e.g., foaming agent which is at the same time a stabilizer, 0.5-10.0% bees wax and 1-15% skin softener and hydrating substance, and preservatives. Thus, a hair balm contained SLS 5.00, ethoxylated castor oil 2.40, Cetomacrogol 3.00, wax 2.00, cocoa butter 15.00, urea 1.00, mixt. of natural salts 6.00, Thyme oil 5.00, lemon oil 0.10, tea tree oil 5.00, 10 herb exts. (e.g., mixt. of exts. of Chelidonium, nettle, etc.), vitamin E 0.30, vitamin A palmitate 0.20, water 34.90, propolis ext. 10.000, and preservative 0.10%.

AB The invention relates to cosmetic or pharmaceutical compn. comprising an oil-contg. biliquid foam dispersed in a salt-contg. aq. phase, in which the aq. phase, having a pH of <7, is gelled by a polymeric sulfonic acid. A particularly preferred gellant is ammonium poly(acryldimethyltauramide-covinylformamide). Unlike many other types of gels, these gels are stable at an acid pH in the presence of substantial amts. of electrolytes, and therefore are useful in delivering acidic active components. A skin-care product contained deionized water qs and Aristoflex AVCO 2.00% by wt. in phase I, Mg ascorbyl phosphate 0.01, TiO₂ 0.01, **lactic acid** 4.00, N-acetylglucosamine 1.00, green **tea** ext. 0.10, and caffeine 0.10% in phase II, 30% NaOH 0.50% in phase III, grapefruit ext. 0.06 and lavender oil 0.04% in phase IV, vitamin E 0.20% in phase V, isoprene glycol 0.50 and Clary sage ext. 0.05% in phase VI, biliquid foam 60.00%.

AB	The inventive cosmetic prepn. of active substances, as such as well as in combination with other active substances, protects the skin against free radical aggression in a particularly effective manner. The prepn. consists of a bark ext. of quebracho blanco which contains at least 90 wt. % of proanthocyanidin oligomers, a silkworm ext. which contains the peptide cecropine, amino acids and a vitamin mixt., a non-ionic, cationic or anionic hydro-gel, phospholipids, a yeast disintegration product and cyclodextrins. The inventive prepn. can contain addnl. active substances such as plant exts. of acerola, sea weed, citrus, bitter orange, cherry, papaya, tea , coffee beans, skin tree and angelica. The prepn. have synergistically increased radical protection factors of up to 10,000. Cosmetic compns. contg. said prepn. have radical protection factors of between 40 and 400 according to the portion of the prepn.

AB	Cosmetics contain skin-lightening ingredients, low-mol. wt. betaines , and silicone oils and/or vegetable oils. The cosmetics are also useful for treatment of rough skin, improve skin moisturizing function, and show good skin compatibility. The betaines enhance transdermal absorption of skin-lightening ingredients. Thus, addn. of trimethylglycine to ellagic acid-contg. cosmetic resulted in 160% transdermal absorption of ellagic acid compared with a control.

AB	Compns. and methods are provided for inhibiting skin irritation attributable to chem. irritants or environmental conditions, by the application of an anti-irritant amt. of water-sol. strontium cation. The compns. can be antiperspirants, deodorants, sunscreens, insect repellents, depilatories, hair dyes, hair bleaches, mouthwashes, ointments, suppositories, etc. Glycolic acid (6 % in 10 % ethanol-in-water) was used as a skin irritant. Strontium nitrate was coadministered as an anti-irritant to subject panels and was shown to inhibit cumulative irritation by 64-84 % at concns. ranging from 250 nM to 500 nM.

AB The invention concerns antimicrobial perfume compns. comprising: a perfume ingredient having an antimicrobial activity of at least 80% as measured by the "agar surface coating test" (ACST), by the "vapor phase test" (VPT) or by the "direct spray method" (DSM); and an active ingredient selected among a grapefruit ext., a Fumaria ext., an ester of fumaric acid or **lactic acid**. The compns. may addnl. contain surfactants, softening agents, etc. Thus, a compn. contained hexyl acetate 5.0, isobornyl acetate 8.0, linalyl acetate 9.2, Ambrox 0.3, bergamot oil 18.0, camphor 2.5, **cedar** oil 8.5, tricyclo[5.2.1.0]dec-3-en-8-yl propionate 3.5, coumarin 4.0, dihydromyrcenol 14.0, dihydroterpeniol 12.5, di-Ph oxide 1.5, 3-p-menthanone 4.0, nerol oxide 0.5, tetralinol 6.5, and 2,4-dimethyl-3-cyclohexene-1-carboxaldehyde 2.0 parts by wt.

AB	The title health products contain (A) wastewater generated from steam distn. of wood and/or branches and leaves of Cupressaceae plants to ext. essential oils , (B) exts. prepd. by soaking the wood and/or branches and leaves in cold water or hot water, (C) exts. prepd. by shaking essential oils of Cupressaceae plants with H ₂ O, (D) exts. prepd. by soaking the wood and/or branches and leaves in a mixt. of alcs. and H ₂ O, or their concd. products. Hydrophilic compds. contained in the wastewater inhibit tyrosinase and show antibacterial and deodorant effects. An aq. ext. of sawdust of Thujopsis dolabrata hondae inhibited mushroom tyrosinase in a dose-dependent manner. A hair tonic contg. EtOH, Swertia ext., vitamin B ₆ , vitamin E, propylene glycol, Kollidon K, menthol , and the above aq. ext. prevented hair loss and stimulated hair growth.

AB	Topical formulations comprising an anti-irritant amt. of aq.-sol. strontium cation, and method for using the same to inhibit skin irritation are disclosed. Clin. tests of over 740 subjects demonstrated that 250 mM strontium chloride had significant and reproducible anti-irritant effects and inhibited the skin irritation by 60%. A cosmetic gel contained ionized water 61.55, 1,3-butylene glycol 5.00, Tween 20 1.00, Germaben II 1.00, Cellosize HEC 0.60, lactic acid 17.25, strontium nitrate 5.00, and sodium hydroxide (20% soln.) 8.60%.

NOVELTY - Cosmetics comprises (A) moisturizing components such as **amino acid** or its salt, **pyrrolidone carboxylic acid** or its salt, **lactic acid** or its salt and/or **betaine**, and (B) **sesquiterpene** alcohols.

USE - As moisturizer for improving rough and dry skin.

ADVANTAGE - The cosmetics has excellent moisturizing effect and improves roughness of the skin effectively.

NOVELTY - The composition comprises at least one aqueous phase and at least one oil phase (preferably in amount 10-75 wt.%) containing at least 1 (preferably 5-20) wt.% (per total wt. of composition) of one or more wax components. The oil phase, before mixing with aqueous phase, has form of supple paste at ambient temperature, and aqueous phase contains at least one active hydrophilic component unstable in oxidizing medium.

DETAILED DESCRIPTION - The composition, which may also contain one or more fillers, is in emulsion form, preferably water/oil type, and may constitute cosmetic or dermatological product.

INDEPENDENT CLAIMS are also included for:

(1) the cosmetic process of treatment and/or cleaning and/or protection of skin, mucous membranes and/or keratinic fibers, comprising application of the claimed composition;

(2) use of composition for treatment and/or cleaning and/or protection of skin, mucous membranes and/or keratinic fibers;

(3) use of the composition for preparation of cosmetic composition for treatment and/or cleaning and/or protection of skin, mucous membranes and/or keratinic fibers;

(4) use of at least 1 wt.% of one or more wax components in the composition comprising oil phase in form of supple paste at ambient temperature, and aqueous phase with at least one active hydrophilic agent unstable in oxidizing medium, to stabilize such hydrophilic agent; and

(5) preparation of the composition, using at least at one stage mixer/screw extruder or cylindrical grinder, and comprising

(i) preparation of oil phase in form of supple paste obtained by heating wax component(s) (and optional other components of oil phase) up to or beyond their melting point, introducing molten mixture into mixer/screw extruder or cylindrical grinder and cooling to ambient

temperature during mixing process (optional other components of oil phase can be introduced at this stage),

(ii) optional addition of emulsifying system to obtained paste, and

(iii) incorporation, with mixing, of aqueous phase, containing hydrophilic agent, into oil phase obtained at stage (1), or of oil phase into aqueous phase.

USE - As cosmetic or dermatological composition.

TECH UPTX: 20010719

TECHNOLOGY FOCUS - ORGANIC CHEMISTRY - Preferred Components: The wax component(s) have melting point at least 50 degreesC, preferably 65 degreesC.

Disperse active hydrophilic agent is selected from ascorbic acid (vitamin C), its derivatives, especially glycosyl and phosphate derivatives, and its esters such as ascorbyl acetate, palmitate and propionate; **urea**; oxygenated water; procystein (L-2-oxothiazolidine 4-carboxylic acid), its salts or esters; dihydroxyacetone; rutin; enzymes such as lipase, protease, phospholipase and cellulases; natural extracts such as green **tea**, extracts of melissa and **thyme**; procyanidolic (sic) oligomers (OPC) such as OPC aubepin, pine and raisin; acids such as kojic, capheic, retinoic and benzene 1,4-di-(3-methylidene 10-camphosulfonic) acid, and their derivatives; glutathione; polyphenols; carotenoid derivatives and their mixtures; and is preferably ascorbic acid (vitamin C) or its derivative.

Oil phase has form of supple paste with dynamic viscosity 3-35 Pa.s (at 25 degreesC), measured using rotation viscometer Contraves TV(TM) provided with 60 Hz mobile (sic) MS-r4.

NOVELTY - A health promoting product comprises ginseng berry extract.

USE - For human consumption as beverages, food products, dietary supplements and other food and drink products or as topical skin care application (claimed). The product has lower acidity than common citrus fruit juices and does not upset a sensitive stomach. It does not contain any artificial sweetener. It serves as alternate to caffeine containing beverages which can stimulate the consumer without the addictive or health-repressing qualities of caffeine. It also moisturizes the skin.

ADVANTAGE - It is a completely natural and refreshing product which contains many essential vitamins, minerals and **amino acids** as well as the benefits of selected herbs and royal jelly. An unique or exotic flavor is provided to the use of ginseng berry ingredient. The product produces mental and physical stimulation as well as other health benefits.

 NOVELTY - Skin cosmetics (I) comprises acerola extract mixed with a cell activator and/or moisturizer
 ACTIVITY - Vulnerary.
 MECHANISM OF ACTION - Cell growth activator. Human neonate fibroblast was seeded in 5% CO₂ at 37 deg. C. 100 µg of cell activator and 100 mg of acerola extract were added. Number of cells proliferated was measured. A very high cell growth enhancing effect was obtained.
 USE - As skin cosmetics such as lotion, cream, moisturizers, ointments, perfumes etc. Also useful for treating wounds, burns cracks, sore, hemorrhoidal diseases etc.

ADVANTAGE - Improves rough skin and prevents aging of skin. Drug efficacy is improved and skin moisture is preserved. Wrinkle formation is inhibited by maintaining the skin tension.

NOVELTY - Preparation of pharmaceutical or cosmetic products comprises:
(1) obtaining an extract of vegetable seeds by germination of seeds biologically cultivated in water in the absence of pesticides and additives and

(2) mixing with other additives and/or excipients.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for the product prepared as above comprising at least 0.01 wt.% germinated seed extract.

ACTIVITY - Dermatological

USE - The product is useful as a bath gel, liquid soap, shampoo, conditioner, hair tonic, aftershave balm, high protection sun cream, medium protection sun milk, face tonic, hydrating cream, serum for preventing skin aging or make-up product.

ADVANTAGE - The composition stimulates cutaneous and capillary metabolism and has hydrating properties.

NOVELTY - Catechins and their cholanolic acid (literally: bile acid) esters as well as plant extracts containing them are used to prevent, treat and care for dry skin and to improve skin condition by stimulating sphingolipid synthesis or strengthening the lipid barrier.

DETAILED DESCRIPTION - Use of catechins and their cholanolic acid (literally: bile acid) esters, including aqueous and organic plant extracts containing them, e.g. from leaves of **Theaceae**, especially *Camellia sinensis* (green tea), or their typical

components, e.g. polyphenols, catechins, caffeine, vitamins, sugars, minerals, amino acids, lipids), for: (a) the prevention, treatment and/or care of dry skin or (b) the stimulation of the sphingolipid synthesis in or the strengthening of the lipid barrier of human skin is new.

USE - In cosmetic and dermatological skin preparations.

ADVANTAGE - The catechin compounds and their extracts are cheaper and more effective than conventionally used intercellular lipid mixtures, especially ceramides. Also, they are physiologically acceptable and have a rapid and long-lasting action.

NOVELTY - A powder composition comprises (wt. composition) a skin irritation reducing agent comprising 1-carboxy-N,N,N-trimethylmethanaminium hydroxide inner salt (I), scutallaria extract (II), bisabolol (III), and their mixtures.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) a powder composition, comprising:

(a) 50 to less than 100 % talc, cornstarch or a mixture thereof;

(b) 0.01-0.5 % menthol;

(c) 0.01-0.5 % eucalyptus oil;

(d) 0.1-10 % zinc oxide;

(e) 0.005-50 % 1-carboxy-N,N,N-trimethylmethanaminium hydroxide inner salt;

(f) 0.00001-0.10 % scutellaria baicalensis extract; and

(g) 0.10-5.0 % chloroxylenol; and

(2) a method of treating prickly heat in humans comprising topical application of (I), scutellaria baicalensis extract, (III), or mixtures thereof.

ACTIVITY - Antimicrobial.

A powder composition (see 'EXAMPLE') was administered to 28 babies and samples of Johnson's Baby Prickly Heat Powder was given to 32 other babies, all of whom had symptoms of prickly heat rash. The later application did not contain either Scutellaria Baicalensis extract or

1-carboxy-N,N,N-trimethylmethanaminium hydroxide inner salt (I), but does include about 200 g 0.2 % Chamomile oil. About 93 % of the participants were classified as having mild to moderate rashes and about 7 % were classified as having more severe rashes. The parents applied the powder of the invention to the infected area(s) of their babies after washing and patting dry at least twice a day for 10 consecutive days. Following this, 96.9 % of the babies treated with Johnson's Baby Prickly Heat powder and 92.9 % of the babies treated with the composition of the present invention had shown improvement in their rashes. 92.8 % of the participants who had the present invention composition applied to their skin, showed rash improvement after only 5 days of treatment and further improved/cleared after 10 days of treatment. Similarly 96.87 % of those using the Johnson's composition reported an improvement in their rashes after 5 days, and further improvement/clearing within 10 days of treatment.

This demonstrated that the composition powder of the present invention effectively cleared and prevented the symptoms of prickly heat rash. It was also found that the rash clearing and treating ability of the composition was independent of body rash numbers or site.

MECHANISM OF ACTION - None given.

USE - The powder compositions are antimicrobial, give a skin-cooling action and skin smoothing properties. They also relieve sufferers from prickly heat (Miliaria Rubra).

ADVANTAGE - The powder compositions work without the use of harsh antimicrobial agents which may irritate sensitive skin.

Cosmetics contain (A) extract(s) of oleum aryophylli (clove), green tea, puerariae radix (pueraria root), mori cortex (mulberry bark), aloe and/or aurantii pericarpium (bitter orange peel) and/or glycyrrhizae radix (licorice root) and/or scutellariae radix (scutellaria root), (B) urea and (C) urea-stabilising agents.

Pref. cosmetics contain 0.005-10% (A), 0.2-5% (B). The urea -stabiliser is e.g. lactic acid, aliphatic dicarboxylic acid, allantoin, ammonium cpds., aminocarboxylic acid (e.g. 6-amino-n-caproic acid), amino acid (e.g. glycine) or nicotinic acid, (C) is added 10-100% to urea.

USE/ADVANTAGE - The cosmetics have high stability and possess high skin permeability. They are used to whiten skin. The cosmetics are therefore useful in the prevention and treatment of birth marks, freckles, etc.

In an example, glyceryl monostearate (5 wt.%), polyethylene glycol monostearate (2), squalane (8), stearyl alcohol (5), glyceryl trioctanoate (8), and dimethyl polysiloxane 50 cs (0.5) were melted at 80 deg.C. To this melt were added at 80 deg.C (5 wt.%) glycerin, citric acid (0.5), sodium citrate (0.5), licorice root extract (2), urea (1), 6-amino-n-caproic acid, pure water, preservative and perfume. The whole was brought into an emulsion and cooled to room temp. with stirring to form a cosmetic cream.

Cosmetic comprises easily alkali-soluble natural melamine and one or more components selected from (a) one or more moisture preservative components

from hyaluronic acid and its salts, collagen and elastin; (b) one or more plant extracts from Scutellaria root, Phellodendri Cortex, lily, Angelicae radix, chinese milk vetch, arnica, camomile, birch and carrot; (c) one or more tissue extracts from deoxyribonucleic acid, yeast extract, bovine blood extract contg. no protein, **lactic acid** bacterium fermentation metabolite, and bovine **thymus** extract; (d) one or more antioxidant from vitamin E and its derivs., vitamin B2 and its derivs. and phospholipid; and (e) one or more substances from ascorbic acid and its derivs., kojic acid and its derivs., bovine placenta extract, hydroquinone derivs., glutathione, cystine derivs., mulberry bark extract and glycyrrhiza extract.

More specifically, the melamine produced by microorganisms is present in the amt. 0.1-5 wt.% based on the cosmetic.

USE/ADVANTAGE - Cosmetic has high safety to skin and prevents skin chapping.

In an example, stearic acid (2.5 wt.%), cetyl alcohol (1.6 wt.%), beeswax (1.5 wt.%), stearic acid monoglycerid (0.8 wt.%), sorbitan sesquioleate (0.3 wt.%), polyoxyethylene oleyl ether (20 E.O.) (0.6 wt.%) and liq. paraffin (10.0 wt.%) were mixed and kept at 70 deg.C to give mixt. (A). 1,3-Butylene glycol (6.0 wt.%), triethanolamine (1.0 wt.%), melamine A produced by organism (0.5 wt.%), collagen (0.01 wt.%), preservative (0.2 wt.%) and pure water (residual amt.) were mixed and kept at 70 deg.C to give mixt. (B). Mixt. (A) was then emulsified in mixt. (B) and perfume (0.1 wt.%) was added to form an emulsion.

Compsns. for topical application contain luteoline (I), i.e. 5,7,3',4'-tetrahydroxyflavone, and/or its glycosides. The active ingredient is (I) or its 7-glucoside and is present as an extract of a plant selected from Achillea millefolium, Matricaria chamomilla, Cnicus benedictus, Cynara scolymus, **Mentha** aquatica and Equisetum arvense.

The compsns. contain 0.1-5 wt.% (I) and 0.5-5 wt.% of a keratolytic agent, esp. **lactic acid**, together with a pH-regulating agent such as triethanolamine. The compsns. are formulated as creams, gels, lotions, milks, pomades, shampoos, emulsions, sprays, balms or sticks.

USES - The compsns. are useful for eliminating 'liver spots' caused by high melanin levels in the skin of elderly people, and for improving the feel of the hair.
